

## **Abstract**

An adhesive sheet composed of a mixture of two thermoplastics T1 and T2, wherein

- a) the adhesive system has a softening temperature of greater than 65°C and less than 5 125°C,
- b) a storage modulus  $G'$  at 23°C, as measured by test method A, of greater than  $10^7$  Pas,
- c) a loss modulus  $G''$  at 23°C, as measured by test method A, of greater than  $10^6$  Pas,
- d) and a crossover, as measured by test method A, of less than 125°C.
